About the Data Portal

The Data Portal provides many advanced features for analyzing, visualizing, and reporting statistical data for Nigeria and its partner states. The portal's functionality works entirely in a Web browser such as Microsoft Internet Explorer.

This user guide describes the portal's features and provides step-by-step instructions for using them.

System requirements

To ensure trouble-free operation of the Data Portal, please check that your computer meets the following requirements.

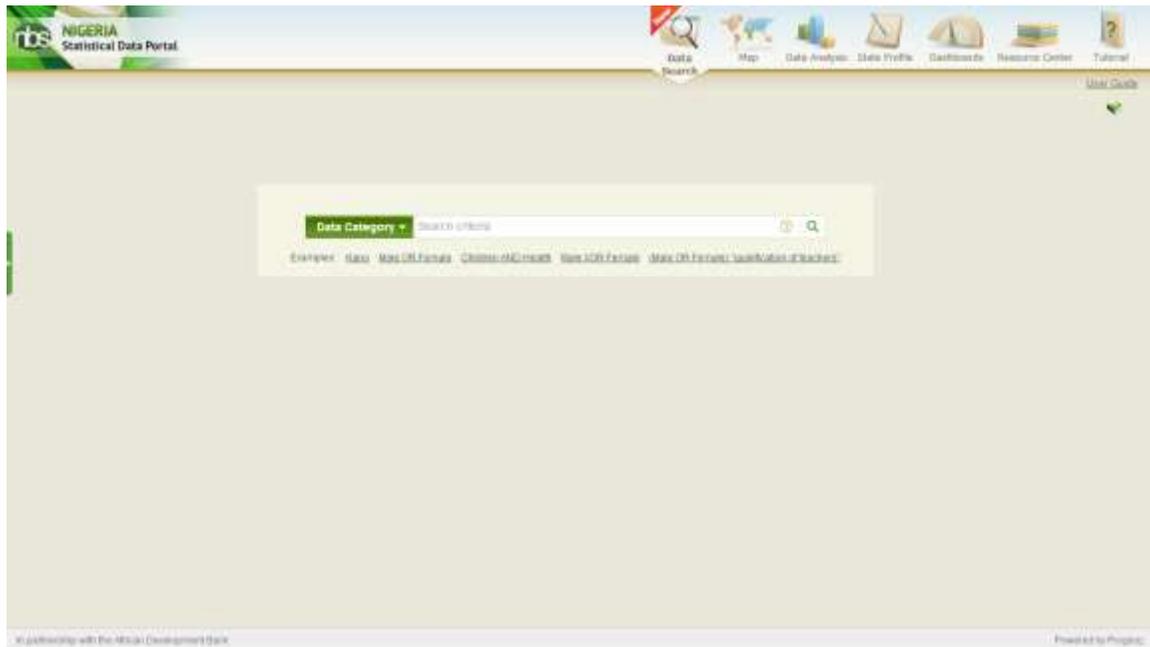

Operating system	Any
Browser	Microsoft Internet Explorer 9.0 or higher, Mozilla Firefox 23 or higher, Google Chrome 29 or higher, or Apple Safari 4 or higher
Additional software	Microsoft Word, Microsoft Excel, Microsoft Power Point and Adobe Acrobat Reader are recommended for opening certain types of downloadable content

2

Data Search

About Data Search

The Data Search page of the portal enables you to search any indicator data in any of the data sources of Nigeria Data Portal.

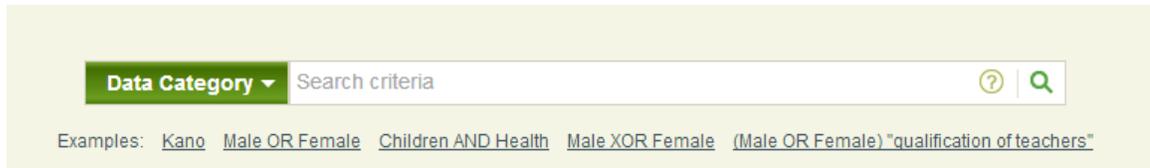

- **To browse to the Data Search page,** choose Data Search from the navigation bar.

Searching the data

To search the data according to any criteria, do any of the following:

- Type the search criteria in the search field.
- Click one of the pre-defined examples under the search field.

The screenshot shows a search interface with a green dropdown menu labeled "Data Category" and a search criteria input field. To the right of the input field are a help icon (question mark) and a search icon (magnifying glass). Below the search bar, there are several pre-defined search examples: "Kano", "Male OR Female", "Children AND Health", "Male XOR Female", and "(Male OR Female) 'qualification of teachers'".

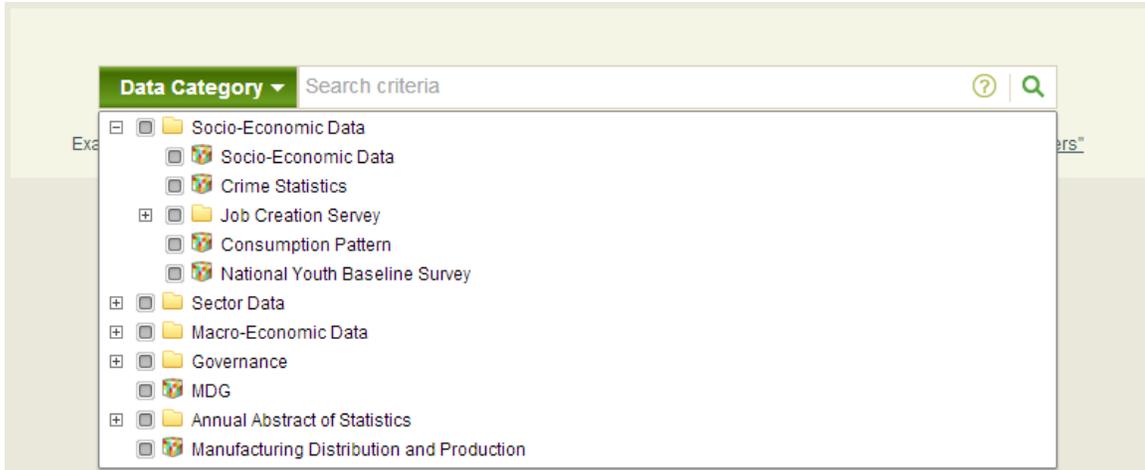

The portal starts the searching process automatically.

TIP Search string may contain the logical operators AND, OR and XOR and the operands () and "". AND searches for both words and phrases, while OR and XOR searches for one or the other. If the search string uses AND and OR or XOR at the same time, the AND operation takes priority, unless you enclose the OR operation in parentheses, as in (A or B) and C. To find an exact phrase, such as "qualification of teachers," enclose the phrase in quotes.

After the search finishes, the list of data series found will be displayed under the search field.

To filter the data by a data source, do the following:

- Open the Source drop-down menu on the left-side if the search field:

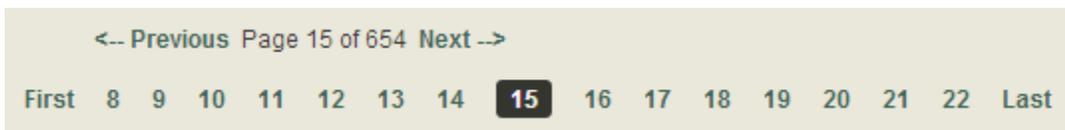

- Uncheck the checkbox near the data source name to hide the results found in this data source.
- Check the checkbox near the data source name to search the data in this data source.

NOTE All the sources are selected by default, so by default the search returns results from all the portal’s data sources.

Navigating the results

If the search returns a large number of data series, use the navigation bar under the list of results:

- **To go to a results page**, click its number button.
- **To go to the subsequent results page**, click the Next button.
- **To go to the previous results page**, click the Previous button.
- **To go to the first page of the results**, click the First button.
- **To go to the last page of the results**, click the Last button.

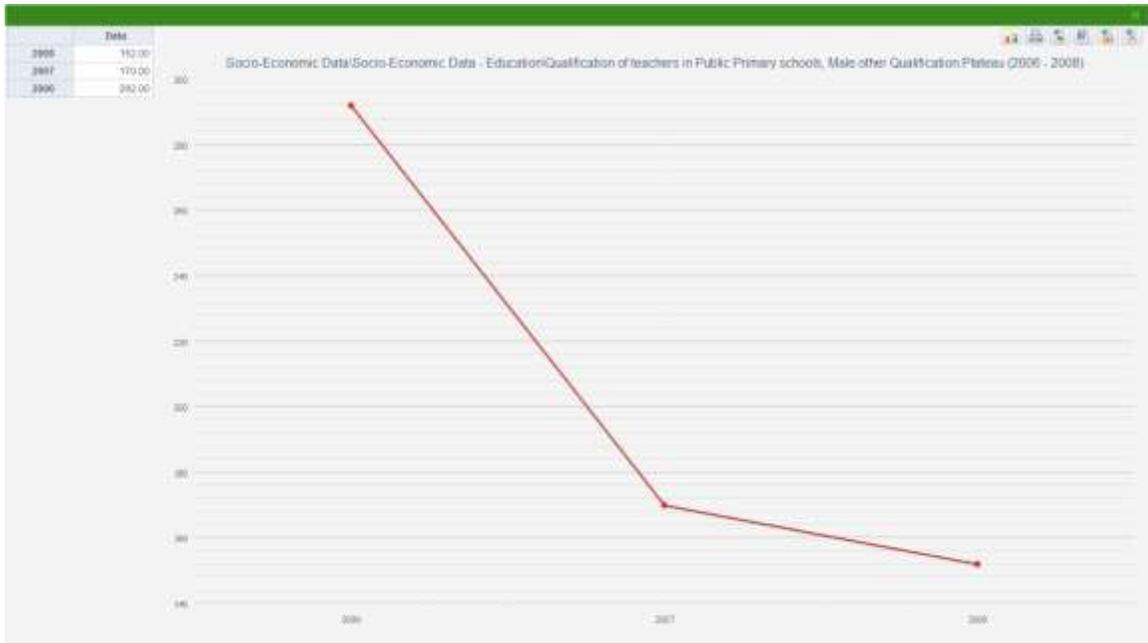

Previewing and viewing the data

The Data Search tool enables you to preview the data of the found data series.

- **To preview the data of the data series**, click the desired data series name in the results list. The preview chart opens under the data series name.
- **To collapse the preview chart**, click the data series name that is opened for preview.
- **To view the full data of the data series in Table-Chart mode**, follow these steps:
 1. Preview the data.
 2. Click the Browse button  **Browse...** under the preview chart. A window opens, offering you the ability to select data for representation and exporting.
- **To select the data for representation and exporting**, select the desired data in the table.

Exporting results

The portal enables you to print the table and chart on your printer or export them to one of four external file formats.

Printing the results

To print the table and chart, follow these steps:

1. Open the data series in the table-chart mode modal window.
2. Click the Print Preview button  in the toolbar. The portal opens a new browser window containing a printer-friendly version of the results.
3. Click the browser's Print button. Your browser sends the printer-friendly version of the results to your printer.

Exporting the results

To export the results to an external file format, follow these steps:

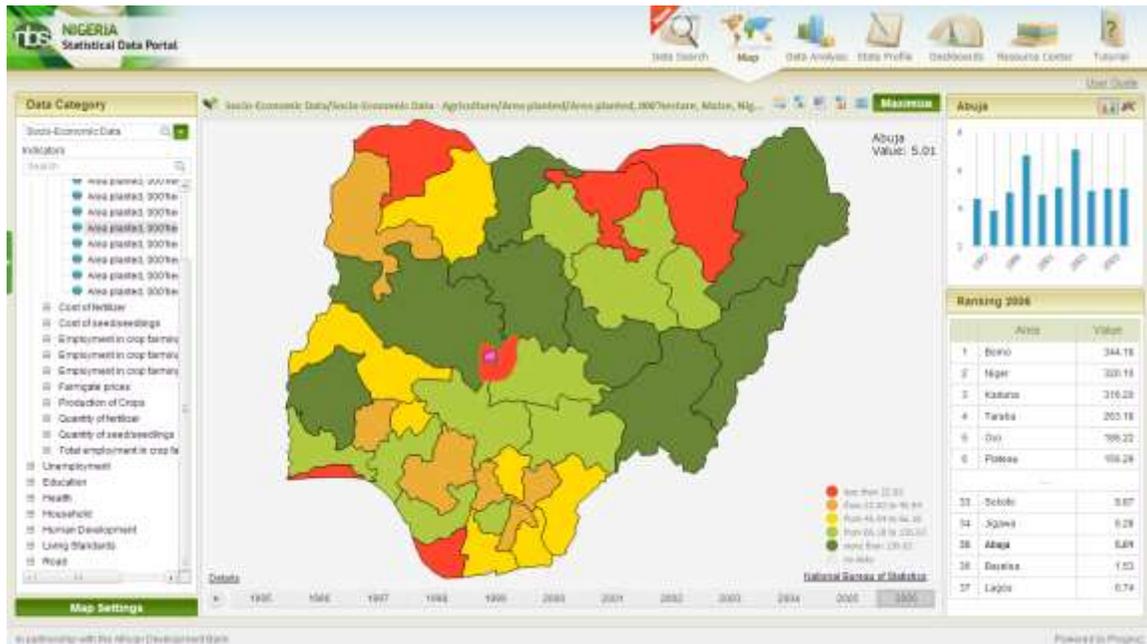

1. Open the data series in the table-chart mode modal window.
2. In the toolbar, click the button corresponding to the file type to which you want to export the results:
 - **Export to XLS**  . This format opens in Microsoft Excel.
 - **Export to DOCX**  . This format opens in Microsoft Word.
 - **Export to PDF**  . This format opens in Adobe Acrobat.
 - **Export to PPTX**  . This format opens in Microsoft Power Point.
3. The portal opens a new browser window, prepares the external file, and initiates your browser's procedure for downloading files. For example, in Microsoft Internet Explorer, the File Download dialog box appears; click Save to save the exported file to your computer.

3

Maps

About Maps

The Maps page of the portal enables you to visualize any indicator in any of several preset years on an interactive map of Nigeria.

- To browse to the **Maps** page, choose Maps from the navigation bar.

Using the map

The map offers several convenient functions, all of which you can activate with one or two mouse clicks.

Visualizing a source and an indicator on the map

To visualize an indicator on the map, click the desired indicator in the list on the left. The portal visualizes the selected elements on the map.

- **To change the date point**, click the year point directly below the map or the desired bar column in the chart in the top right corner of the browser window.

Searching an indicator in the indicators list

To find an indicator quickly, use the Search tool above the indicators list.

Type the text to find and either press Enter or click the magnifying-glass icon, and the portal displays all indicators names that contain this sequence of characters in the indicators list.

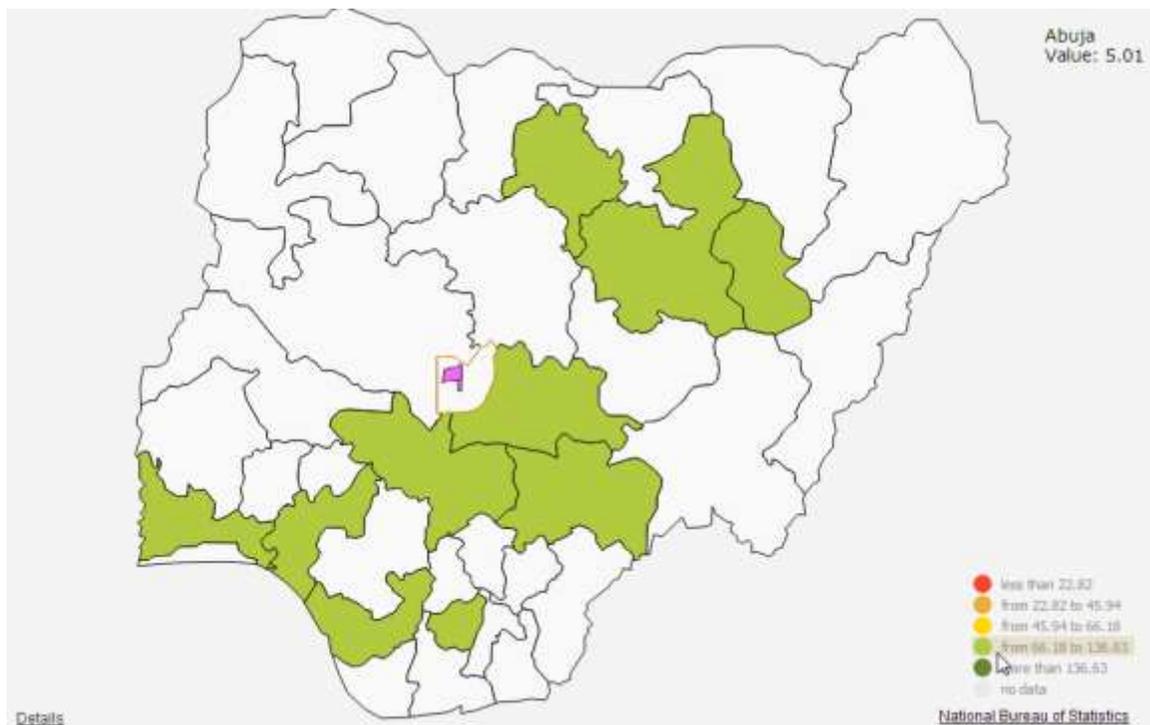

Viewing territory details

The details for the currently selected territory include a chart comparing the territory data over all years and a list giving the territory's rank in this particular source and indicator.

- **To view details for a particular territory,** click this territory on the map or its name in the table on the right.
- **To change the chart type of the comparing the territory data chart,** do any of the following:
 1. Click the Linear button  in the toolbar to switch to the linear chart.
 2. Click the Column button  in the toolbar to switch to the column chart.

Using the legend

The map's legend enables you to highlight only those partner states that belong to a specific range of data. To do so, hover over the desired range with the mouse pointer. You do not need to click the mouse button to see this effect.

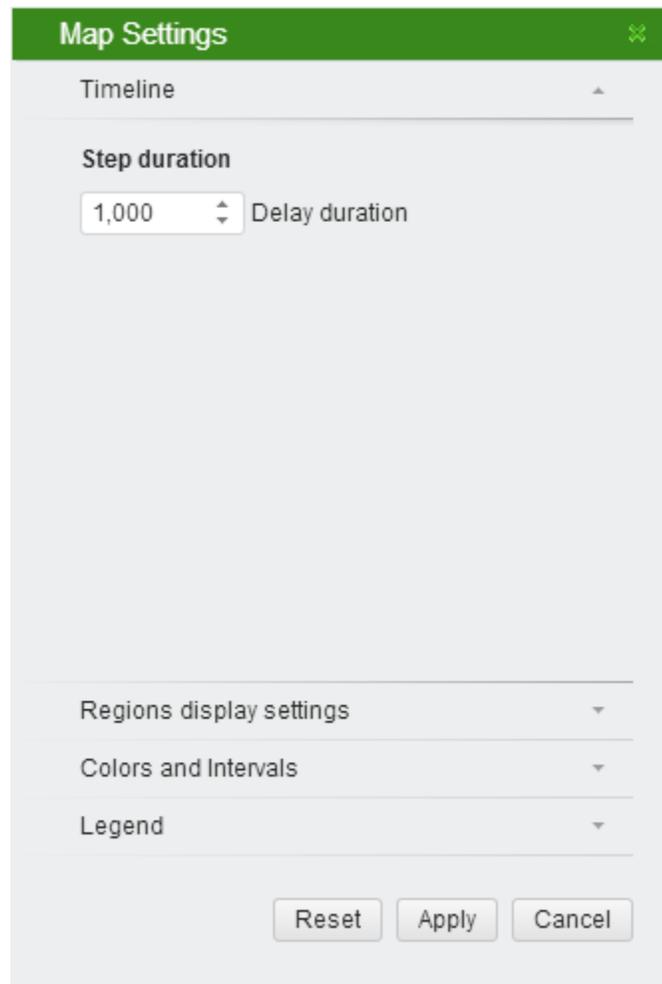

Map Settings

The Legend Configuration tool enables you to edit the map legend relative to your needs.

To edit the map legend, click the Map Settings button under the Indicators panel on the left side of the browser window. The Map Settings dialog box appears.

To change the legend, do any of the following:

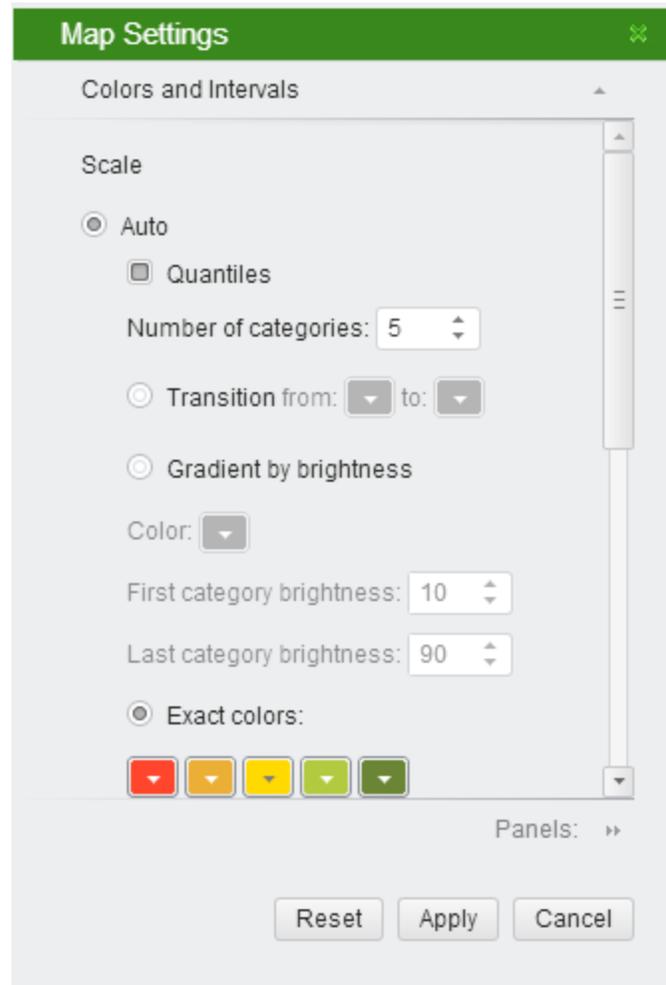

- **To configure the timeline step duration settings, go to the Timeline panel:**

Then do the following:

- Change the value in the Delay duration control to change the speed of map playing.

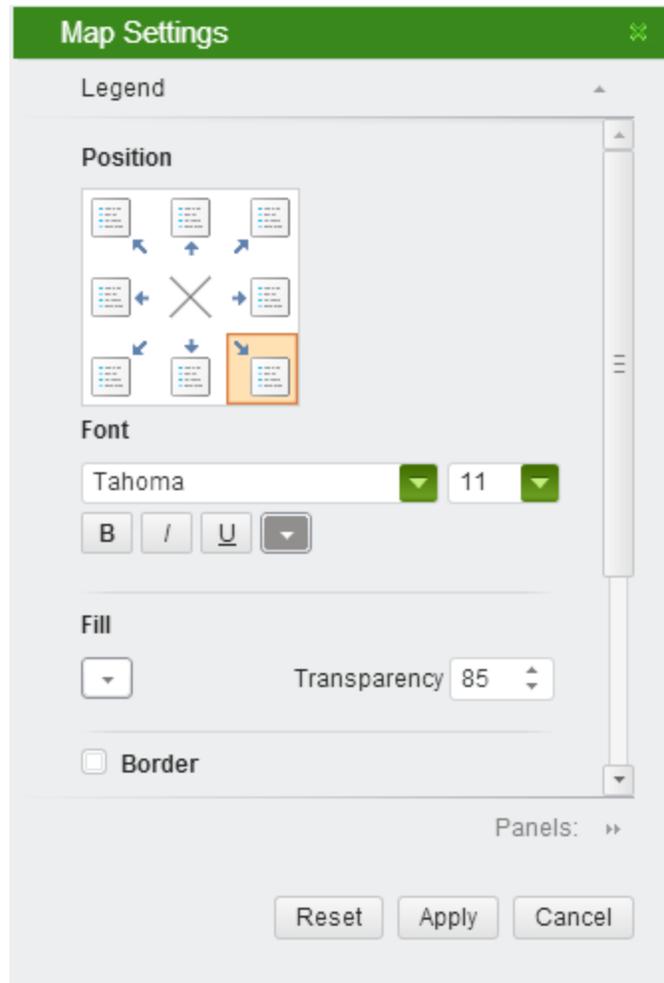

To configure the group settings, go to the Color panel:

Then do any of the following:

- Change the number of groups in the Number of categories control.
- Change the grouping type by selecting the desired type in the.
- Change the fill type by selecting the desired type.
- Set up the colors of the groups by clicking the color edit buttons .
- Automatically determine the appropriate intermediate colors between your first and last color choices by clicking Calculate Gradient.

To configure the legend settings, go to the Legend panel:

Then do any of the following:

- Change the legend placement.
- Set up the font style, color and size of the legend.
- Change the background color and transparency under Fill.
- Customize the border of the legend if necessary.
- Uncheck the Locate With Intersection checkbox if necessary.
- Add the title to the legend by checking the Title checkbox.

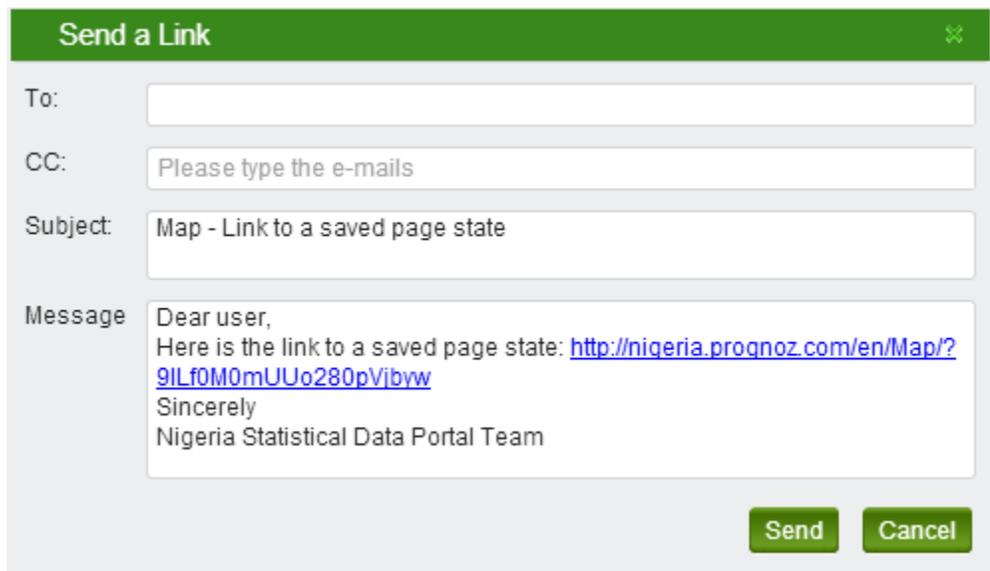

NOTE The legend title contains the name of the selected indicator that is visualized on the map.

Getting the link to the map page

The portal enables you to get link to the map page with specific page settings.

Do the following:

- Configure the map according to your wish.
- Click the “Send a Link” button  in the toolbar. The Send a Link dialog box appears:

Send a Link

To:

CC:

Subject:

Message: Dear user,
Here is the link to a saved page state: <http://nigeria.prognoz.com/en/Map/?9ILf0M0mUUo280pVibw>
Sincerely
Nigeria Statistical Data Portal Team

- Enter your Email and Click Send.

NOTE You can choose any database and indicator, and change map settings. After that send a link to your Email and paste received link in address field in a new browser window. The application will open the page with the same settings.

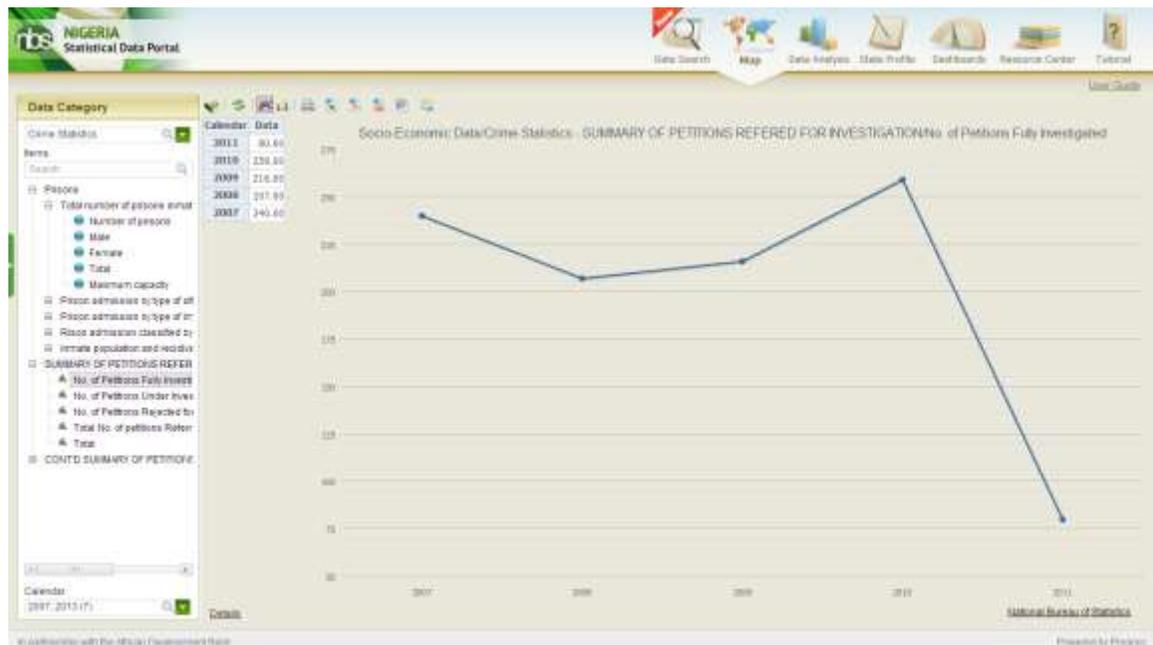

Exporting the map

The Maps page of the portal enables you to export any indicator in any year to the different file formats.

- **To export map to a XLSX file**, click the Export to XLSX button  above the map. This format opens in Microsoft Excel.
- **To export map to a DOCX file**, click the Export to DOCX button  above the map. This format opens in Microsoft Word.
- **To export map to a PPTX file**, click the Export to PPTX button  above the map. This format opens in Microsoft Power Point.
- **To export map to a PNG file**, click the Export to PNG button  above the map.

Additional data view

The additional data view enables you to visualize, customize, and print or export any indicator from Country Indicators data source.

Using the additional data view

Select the Country Indicators data source from the Database drop-down menu above the indicators list to open the table-chart data view.

Table-Chart data view enables you to change the selection in two data dimension. The customizable dimensions appear in a list of dimension boxes directly beneath the expanding list on the left side of the browser window. The dimension boxes contain selectable *elements* or items, which represent the data that appears in the report.

- **To open a dimension box**, click the inverted triangle on its right side. A drop-down menu of selectable elements appears.
- **To close the dimension box**, click anywhere outside it.

- **To expand a parent element in the Indicators dimension**, click the triangle icon to the left of the parent element's name. The child elements for this parent appear.
- **To view more elements in the dimension box**, scroll to the bottom of the drop-down menu (or the bottom of the list of child elements under a parent element) and click Next. If you do not see a Next choice, there are no more elements to display.
- **To resize the dimension box**, drag the handle in the upper right corner of the drop-down menu.
- **To select or deselect an element from the dimension box**, click the element in the drop-down menu.

After you change the element selection of a dimension and close the dimension box, the portal automatically updates the data in your report. To refresh the data in the report manually, click the Calculate button  in the toolbar.

Using the dimension box's context menu

You can also right-click any element in the open dimension box for a context menu of time-saving commands:

- **Select All.** The portal selects all the elements in the dimension.
- **Deselect All.** The portal deselects all the elements in the dimension.
- **Select Siblings.** The portal selects all the elements at the same level in the hierarchy as current element.
- **Deselect Siblings.** The portal deselects all the elements at the same level in the hierarchy as the current element.
- **Select Children.** The portal selects all the child elements of the current parent.
- **Deselect Children.** The portal deselects all the child elements of the current parent.
- **Expand All.** The portal expands all parent elements.
- **Collapse All.** The portal collapses all parent elements.
- **Level Names.** The portal presents the dimension elements list with the selected level name.

- **Sorting.** The portal sorts dimension elements according to the selected sorting rule.

NOTE Not all context menu commands are available in every dimension box.

Searching for elements in a dimension

To find an element quickly, use the dimension box's Search feature:

- Close the dimension box if necessary, and click its magnifying-glass icon .
- In the dimension box, type the text to find, and press ENTER. The portal displays all element names that contain this sequence of characters in the dimension box's drop-down menu.

Printing and exporting the additional data view document

The portal enables you to print the dashboard document on your printer or export them to one of four external file formats.

Printing the results

To print the dashboard document, follow these steps:

- Click the Print Preview button  in the toolbar. The portal opens a new browser window containing a printer-friendly version of the results.
- Click the browser's Print button. Your browser sends the printer-friendly version of the results to your printer.

Exporting the results

To export the dashboard document to an external file format, follow these steps:

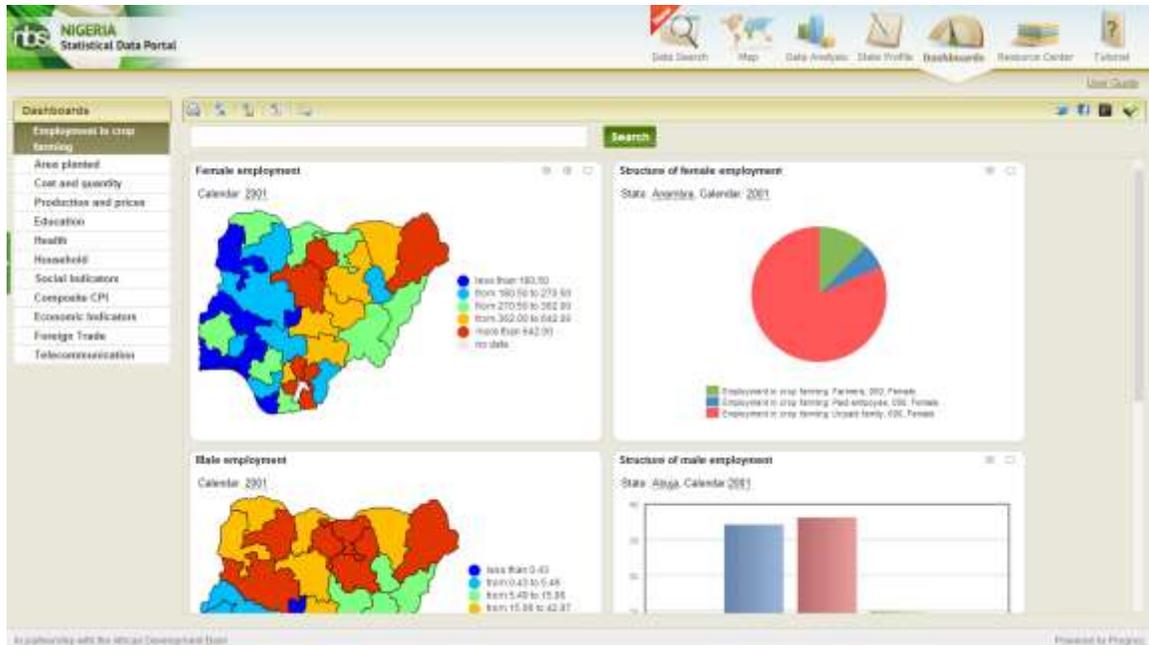

- In the toolbar, click the button corresponding to the file type to which you want to export the results:
 - **Export to XLSX**  . This format opens in Microsoft Excel.
 - **Export to PDF**  . This format opens in Adobe Acrobat.
 - **Export to DOCX**  . This format opens in Microsoft Word .
 - **Export to PPTX**  . This format opens in Microsoft Power Point..
- The portal opens a new browser window, prepares the external file, and initiates your browser's procedure for downloading files. For example, in Microsoft Internet Explorer, the File Download dialog box appears; click Save to save the exported file to your computer.

4

Dashboards

About Dashboards

The Dashboards page of the portal shows tables, charts, and maps for various indicators. The visualizations that you get for any given indicator are built into the portal; you cannot modify these preset types directly, although, for your convenience, you can change any chart or map into a table and back again with a simple mouse click.

- **To browse to the Dashboards page**, choose Dashboards from the navigation bar.

Working with dashboard visualizations

To view the dashboards for a group of indicators, click on the desired dashboard document on the left side of the browser window. The portal displays this indicator's preset dashboard visualizations in the results area. Each dashboard appears in its own frame.

- **To maximize or minimize a dashboard frame**, click the Maximize/Minimize icon  in the upper right corner of the dashboard frame. A maximized dashboard frame expands to fill more of the screen, while a minimized one sits comfortably beside its neighbor.
- **To view a chart or map in table form**, click the Data button  just above the chart or map.
- **To view a table in its designated graphical form, whether chart or map**, click the As Chart button  or As Map button  as applicable. This button appears just above the table.

TIP The map dashboard includes Legend, just like the large map in the Maps page. For instructions on how to use these controls, see “Using the map” in Chapter 3. Please note that clicking an individual country on the map dashboard does *not* show individual country details.

Searching the dashboard document

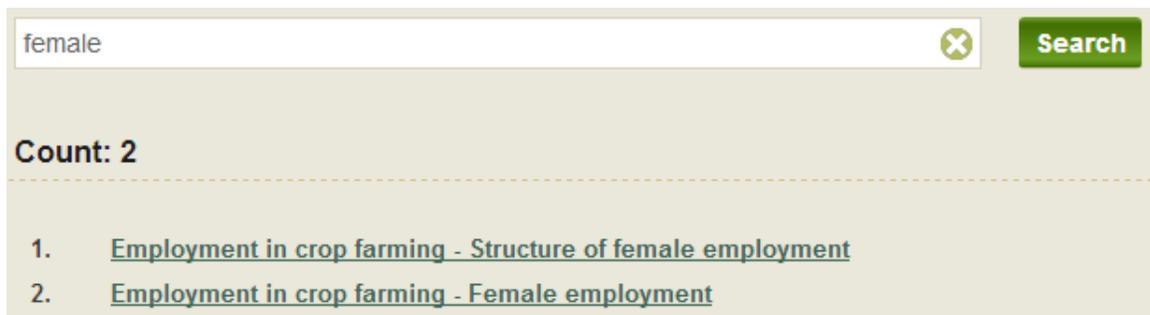

To search the separate dashboard according to any criteria, do the following:

1. Type the search criteria in the search field and click the Search button near the search field.

A search input field with a green 'Search' button.

After the search finishes, the list of dashboards found will be displayed under the search field.

A search results interface showing the search term 'female', a 'Search' button, and a list of two dashboard titles.

female ✕ Search

Count: 2

1. [Employment in crop farming - Structure of female employment](#)
2. [Employment in crop farming - Female employment](#)

2. Click the dashboard name in the results list. The dashboard opens under the dashboard name.
3. Click the opened dashboard name to collapse it.

Sharing the dashboard document

The portal enables you to share the dashboard document to different social networks.

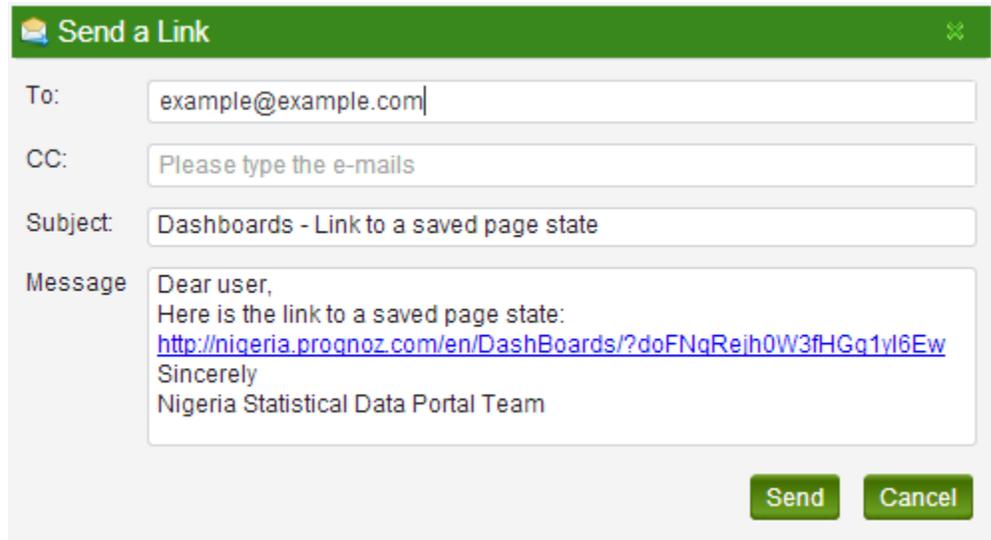

Do any of the following:

- **To publish the link to a certain document in Twitter**, click the Share to Twitter button  in the top right corner of the browser window.
- **To publish the link to a certain document in Facebook**, click the Share to Facebook button  in the top right corner of the browser window.
- **To publish the link to a certain document in Google+**, click the Share to Google+ button  in the top right corner of the browser window.

Getting the link to the dashboard document

The portal enables you to get the link to the current dashboard document.

- To get the link click the “Send a Link” button  in the toolbar.
- The Send a Link dialog box appears:

Send a Link

To:

CC:

Subject:

Message: Dear user,
Here is the link to a saved page state:
<http://nigeria.proqnoz.com/en/DashBoards/?doFNqReih0W3fHGq1vI6Ew>
Sincerely
Nigeria Statistical Data Portal Team

- Enter your Email, Click Send.

NOTE You can choose any dashboard document. After that send a link to your Email and paste received link in address field a new browser window. The application will open the same dashboard document.

Printing and exporting the dashboard document

The portal enables you to print the dashboard document on your printer or export them to one of two external file formats.

Printing the results

To print the dashboard document, follow these steps:

1. Click the Print Preview button  in the toolbar. The portal opens a new browser window containing a printer-friendly version of the results.
2. Click the browser's Print button. Your browser sends the printer-friendly version of the results to your printer.

TIP Use the Print button  in the top right corner of the separate dashboard toolbar to print the dashboard.

Exporting the results

To export the dashboard document to an external file format, follow these steps:

1. In the toolbar, click the button corresponding to the file type to which you want to export the results:
 - **Export to XLSX**  . This format opens in Microsoft Excel.
 - **Export to PDF**  . This format opens in Adobe Acrobat.
 - **Export to PPTX**  . This format opens in Microsoft Power Point.
2. The portal opens a new browser window, prepares the external file, and initiates your browser's procedure for downloading files. For example, in Microsoft Internet Explorer, the File Download dialog box appears; click Save to save the exported file to your computer.

TIP Use the Export to Excel button  in the top right corner of the separate dashboard toolbar to export the dashboard to XLS document.

5

Data Analysis

About Data Analysis

The Data Analysis page of the portal offers a powerful tool for slicing and visualizing the data. The data is provided in several dimensions, such as Calendar, States, Indicators and others.

	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011
Direct Investment in Reporting Economy	1,140.70	1,183.08	1,861.82	1,897.44	1,850.36	4,878.26	4,897.81	6,068.73	8,248.04	8,649.52	8,098.96	8,914.88
Equity capital						3,221.48	3,047.81	3,808.70	4,858.71	5,450.02	3,189.32	5,748.21
Reinvested earnings						1,758.77	1,850.00	2,112.00	3,228.32	3,178.80	3,839.04	2,812.25
Other capital								38.03	83.01	20.71	-60.00	254.43

- To browse to the Data Analysis page, choose Data Analysis from the navigation bar.

Selecting elements from the dimensions

The data dimensions appear in dimension boxes on the left side of the interface. These dimension boxes contain selectable *elements* or items, which represent the data that appears in the results area.

All the dimensions dimension are *structured*, in that they organize elements into a two- or three-tiered hierarchy. For example, Some Indicators are further divided into several separate sub elements.

- To open a dimension box, click the inverted triangle on its right side. A drop-down menu of selectable elements appears.
- To close the dimension box, click anywhere outside it.

- **To expand a parent element in the Indicators dimension,** click the triangle icon to the left of the parent element's name. The child elements for this parent appear.
- **To view more elements in the dimension box,** scroll to the bottom of the drop-down menu (or the bottom of the list of child elements under a parent element) and click Next. If you do not see a Next choice, there are no more elements to display.
- **To resize the dimension box,** drag the handle in the upper right corner of the drop-down menu.
- **To select or deselect an element from the dimension box,** click the element in the drop-down menu.

NOTE The dimensions in the Columns and Rows positions accept multiple element selections, while the dimension in the Fixed position accepts a single selection only. (See “Changing the position of the dimensions” later in this chapter for more information.)

Using the dimension box's context menu

You can also right-click any element in the open dimension box for a context menu of time-saving commands:

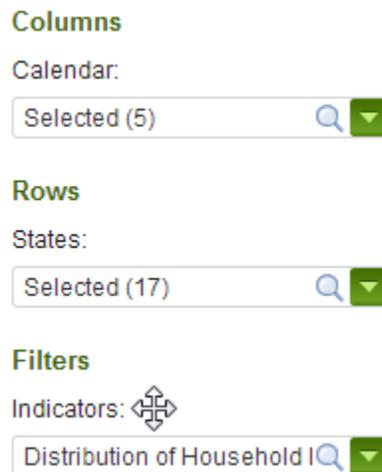

- **Select All.** The portal selects all the elements in the dimension.
- **Deselect All.** The portal deselects all the elements in the dimension.
- **Select Level.** The portal selects all the elements at the same level in the hierarchy as current element.
- **Deselect Level.** The portal deselects all the elements at the same level in the hierarchy as the current element.
- **Select Dependent.** The portal selects all the child elements of the current parent.
- **Deselect Dependent.** The portal deselects all the child elements of the current parent.
- **Unfold Hierarchy.** The portal expands all parent elements.

- **Collapse Hierarchy.** The portal collapses all parent elements.
- **Level Names.** The portal presents the dimension elements list with the selected level name.
- **Sorting.** The portal sorts dimension elements according to the selected sorting rule.

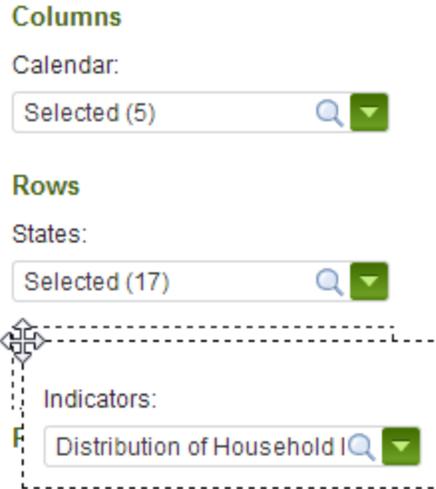

NOTE Not all context menu commands are available in every dimension box.

Changing the position of the dimensions

The dimensions appear under three positions: Columns, Rows, and Fixed. The Columns and Rows represent the columns and rows of the table in the results area, while the Fixed position represents the values in the cells of the table. By default, the Calendar dimension is in the Columns position, the States dimension is in the Rows position, and the Indicators dimension is in the Fixed position.

- **To change the position of a dimension,** drag the dimension from its current position, and drop it under the desired position. The portal displays a blue cursor to show you where the dragged dimension will go.

NOTE If you wish to construct the table and select the data before table will be updated, uncheck the Autoupdate checkbox in the toolbar. Select the data and set up the position of the dimensions. Click the Refresh Data button to update the table.

- **To invert the dimensions in rows and columns quickly**, click the Rotate Table button  in the toolbar above the Table view (see “Working in Table view” later in this chapter for more information).

Undoing and redoing actions

To undo the most recent change to the data dimensions or the results area, click the Back button  in the toolbar above Table view. To redo an action that you previously undid, click the Forward button .

NOTE Not all actions are undoable.

Working in Table view

Table view shows data in table form. This view appears by default in Data Analysis. You can also show the table by clicking the Table Mode button , the Chart Mode button , or the Table-Chart Mode button  in the toolbar.

TIP Click the Refresh button  Refresh data in the toolbar to refresh the current table values.

This section covers the portal's various commands and options for working with data in Table view.

Sorting the table

To sort the table, click the grey inverted triangle  of the column by which you want to sort. The icon changes to a dark-grey inverted triangle , meaning that the table is sorted in descending order according to the values in this column. Click the icon a second time, and it changes to a dark-grey triangle , meaning that the table is sorted in ascending order according to the values in this column. Click the icon a third time to revert it to the grey inverted triangle and turn off table sorting.

Filtering data from the table

The portal enables you to hide or *filter* data from the table when this data matches a specific type or meets a certain condition. To filter data from the table, follow these steps:

- Click the Filter button  in the toolbar above Table view. The Data Filtering Settings dialog box appears:

Data filtering settings

Hide zero cells
 Hide empty cells
 Hide non-numeric cells

Hide cells satisfying the condition:
No condition

A: 0 B: 0

Apply Delete Cancel

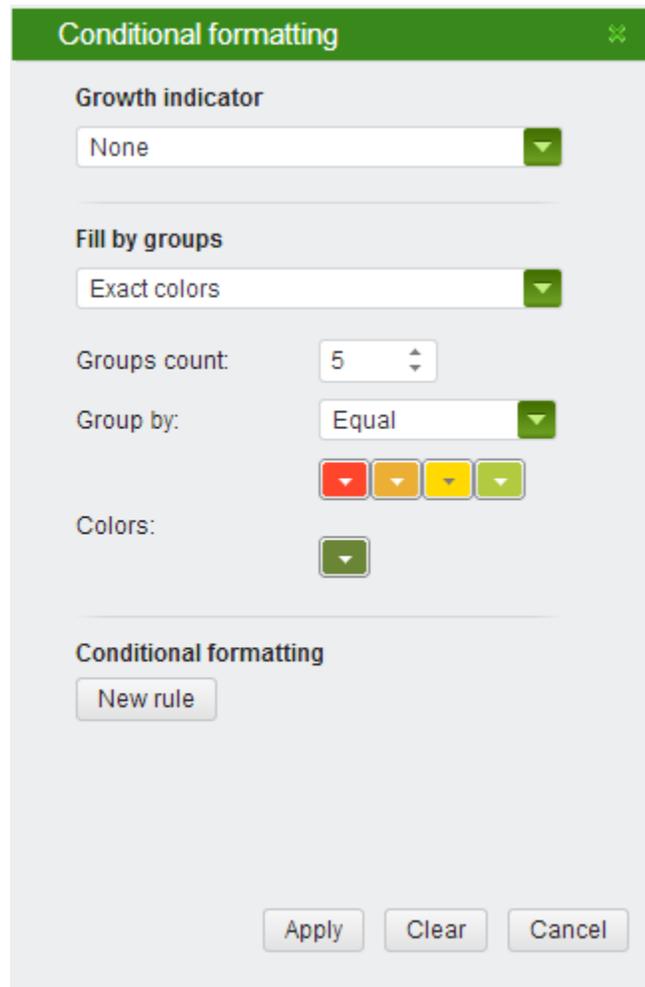

- Check or uncheck general filtering options:
 - **Hide zero cells.** Check this option to hide table cells containing the value 0.
 - **Hide empty cells.** Check this option to hide table cells containing no value whatsoever. This option does *not* filter table cells whose value is equal to 0.
 - **Hide non-numeric cells.** Check this option to hide table cells containing letters or symbols but no numbers.
- Choose a filtering condition from the Hide Cells Satisfying The Condition drop-down menu, and then type values in the A and B fields as required. The A and B values correspond to the variables A and B in the condition statement. If your filtering condition does not require a B value, then this field remains uneditable.
- Click Apply. The Data Filtering Settings dialog box closes, and the portal applies the filter to the table.

TIP To remove the filter from the table, choose None from the Hide Cells Satisfying The Condition drop-down menu and then click Apply, or simply click Clear at the bottom of the Data Filtering Settings dialog box.

Adding conditional formatting to the table

Conditional formatting uses a color gradient or a graphical icon to indicate the relative value in any given table cell. To add conditional formatting, follow these steps:

- Click the Conditional Formatting button  in the toolbar above Table view. The Conditional Formatting dialog box appears:

The image shows a 'Conditional formatting' dialog box with a green header and a close button. It contains several sections: 'Growth indicator' with a dropdown menu set to 'None'; 'Fill by groups' with a dropdown menu set to 'Exact colors'; 'Groups count' with a spinner box set to '5'; 'Group by' with a dropdown menu set to 'Equal'; and 'Colors' with four color selection buttons (red, orange, yellow, green) and a dropdown menu. At the bottom, there is a 'Conditional formatting' section with a 'New rule' button, and three main buttons: 'Apply', 'Clear', and 'Cancel'.

NOTE The portal applies the default conditional formatting rule while you set your preferences for this feature.

- Choose rows or columns growth indication in the Growth Indicator drop-down menu if necessary.
- Configure the Fill By Groups rule by selecting the desired group from the Fill By Groups drop-down menu. Then do any of the following:
 - Select the number of groups in the Number Of Groups control.
 - Select how to group the results from the Group By drop-down menu.
 - Choose the colors of the groups by clicking the color edit buttons .
- To configure your own formatting rule, click the Create A Rule button, and then do any of the following:
 - Choose a formatting condition from the Condition drop-down menu, and then type values in the A and B fields as required. The A and B values correspond to the variables A and B in the condition statement. If your filtering condition does not require a B value, then this field is hidden.
 - Set up the font style, size, and color.
 - Select the background color.

TIP To remove conditional formatting from the table, click the Conditional Formatting button  and then either select None in the Growth Indicator and Fill By Groups drop-down menus or click the red-cross button  to delete a particular conditional formatting rule or click the Clear button to remove all the rules simultaneously.

Adding columns and rows for totals

The portal enables you to add *totals columns* or *totals rows*, which are columns or rows of the table containing sums, averages, or other common mathematical functions. To add totals to the table, follow these steps:

- Click the Totals button fx in the toolbar above Table view. The Totals Settings dialog box appears:

Totals

Rows	Columns
<input type="checkbox"/> Sum	<input type="checkbox"/> Sum
<input type="checkbox"/> Average	<input type="checkbox"/> Average
<input type="checkbox"/> Minimum	<input type="checkbox"/> Minimum
<input type="checkbox"/> Maximum	<input type="checkbox"/> Maximum
<input type="checkbox"/> Number of non-empty	<input type="checkbox"/> Number of non-empty
<input type="checkbox"/> Number of empty	<input type="checkbox"/> Number of empty
<input type="checkbox"/> Mode	<input type="checkbox"/> Mode
<input type="checkbox"/> Median	<input type="checkbox"/> Median
<input type="checkbox"/> Variance	<input type="checkbox"/> Variance
<input type="checkbox"/> Root-mean-square deviation	<input type="checkbox"/> Root-mean-square deviation
<input type="checkbox"/> Skewness	<input type="checkbox"/> Skewness
<input type="checkbox"/> Kurtosis	<input type="checkbox"/> Kurtosis
<input type="checkbox"/> Range	<input type="checkbox"/> Range
<input type="checkbox"/> Variation coefficient	<input type="checkbox"/> Variation coefficient
<input type="checkbox"/> Sum of squares	<input type="checkbox"/> Sum of squares
<input type="checkbox"/> First order autocorrelation	<input type="checkbox"/> First order autocorrelation
<input type="checkbox"/> Upper decile	<input type="checkbox"/> Upper decile
<input type="checkbox"/> Upper quartile	<input type="checkbox"/> Upper quartile
<input type="checkbox"/> Lower quartile	<input type="checkbox"/> Lower quartile
<input type="checkbox"/> Lower decile	<input type="checkbox"/> Lower decile

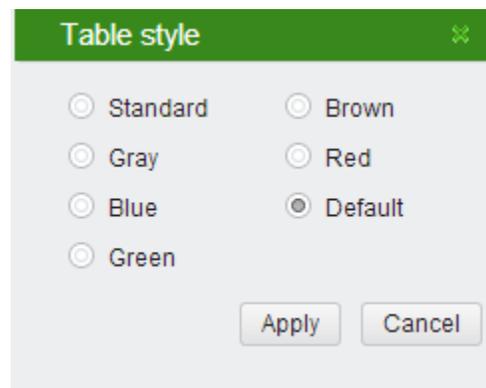

- Check the total types under Rows or Columns that you would like to add. Checking items under Rows adds the designated rows to the table, while checking items under Columns adds the designated columns. You may add as many of each as you like.
- Check the Treat Empty Values As Zeroes option to make the portal assume the value of 0 for table cells that do not have any value. Doing so can affect the results of certain totals types, or it can have no effect at all.
- Click Apply. The Totals Settings dialog box closes, and the portal adds the appropriate rows and columns to the table.

TIP To remove totals from the table, uncheck the totals to remove, or simply click Clear at the bottom of the Totals Settings dialog box. Please note that clicking the Clear button removes all totals from the table.

Applying a table style

A *table style* is a collection of appearance attributes for the table. Applying a table style does not change the values in the table, but it does change the colors that the portal uses to display the table. To apply a table style, follow these steps:

- Click the Table Style button  in the toolbar above Table view. The Table Style dialog box appears:

- Choose a table style by clicking its radio button.
- Click Apply. The Table Style dialog box closes, and the portal applies the desired table style to the table.

TIP To revert to the default appearance of the table, select the Standard style in the Table Style dialog box.

Setting the data format

The *data format* determines how the portal displays the values in the table cells. There are four data formats, each of which applies to all the values in the table:

- **General format.** The portal displays all data values exactly as they appear in the data source, without rounding. To apply this data format, click the General Format button  in the toolbar above Table view.
- **Currency format.** The portal displays all data values with a currency symbol and rounds to nearest hundredths by default. To apply this data format, click the Currency Format button  in the toolbar above Table view.
- **Percentage format.** The portal displays all data values with a percent symbol and rounds to nearest hundredths by default. To apply this data format, click the Percentage Format button  in the toolbar above Table view.
- **Delimiter format.** The portal rounds all data values to nearest hundredths by default. To apply this data format, click the Delimiter Format button  in the toolbar above Table view.

TIP To increase the decimal precision of rounded table values in Currency, Percentage, or Delimiter format, click the Increase Decimal button  in the toolbar above Table view. To decrease the decimal precision of rounded table values, click the Decrease Decimal button . Please note that these buttons do not appear in the toolbar when the table is in General format.

Working in Chart view

Chart view visualizes data in chart form. You can also show Chart view by clicking the Chart Mode button  or the Table-Chart Mode button  in the toolbar.

TIP The toolbar buttons for Chart view appear either in the toolbar above the results area when Chart Mode or Table-Chart Mode is active or in the special toolbar above Chart view when Table-Chart Mode is active.

This section covers the portal's various commands and options for working with data in Chart view.

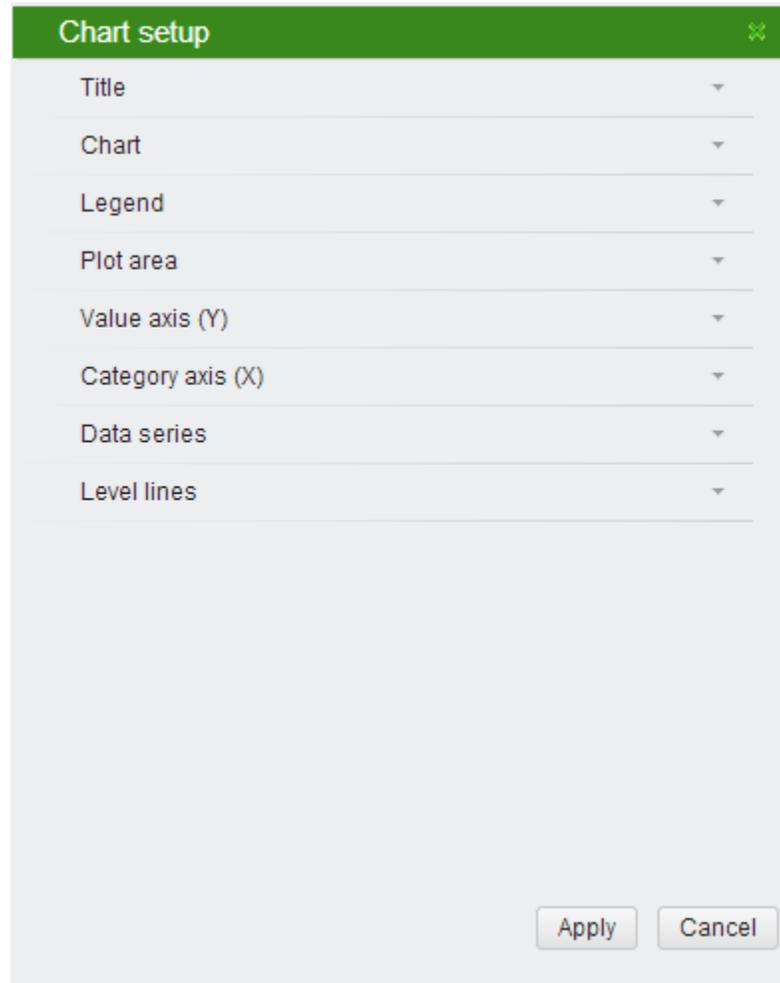

Changing the chart type

The portal provides various chart types. To change the chart type, click any of the following toolbar buttons:

- **Line.** To apply this type of chart, click the Line button .
- **Column.** To apply this type of chart, click the Column button .
- **Bar bottom-up.** To apply this type of chart, click the Bar Bottom-Up button .
- **Stacked column.** To apply this type of chart, click the Stacked Column button .
- **Stacked bar bottom-up.** To apply this type of chart, click the Stacked Bar Bottom-Up button .
- **Area.** To apply this type of chart, click the Area button .
- **Pie.** To apply this type of chart, click the Pie button .

Customizing the chart

To customize the chart in Table-Chart mode or Chart mode, click the Customize chart button . The chart setup dialog box appears.

Viewing the indicators information

The application provides information about an indicator's description and source. To view the indicators information, do either of the following:

Select the desired indicators in Indicators dimension, and then click the Indicators Information button  in the top right corner of the browser window.

Click the hyperlink Indicators Information in the top right corner of the browser window, open the drop-down menu in the top right corner of this window, and choose the indicators whose information you wish to see.

Changing the range of data displayed on the chart in Table-Chart mode

To change the range of data displayed on the chart in Table-Chart mode, drag to select the cell or range of cells in Table view that you wish to display in Chart view. The portal redraws the chart to include only the data from the selected cells.

You can also select table elements with a single click:

- **To select an entire column of the table**, click the header cell at the top of the column.
- **To select an entire row of the table**, click the header cell at the left of the row.
- **To select the entire table**, click the cell in the upper-left corner of the table, where the header column and the header row intersect.

Hiding the table in Table-Chart mode

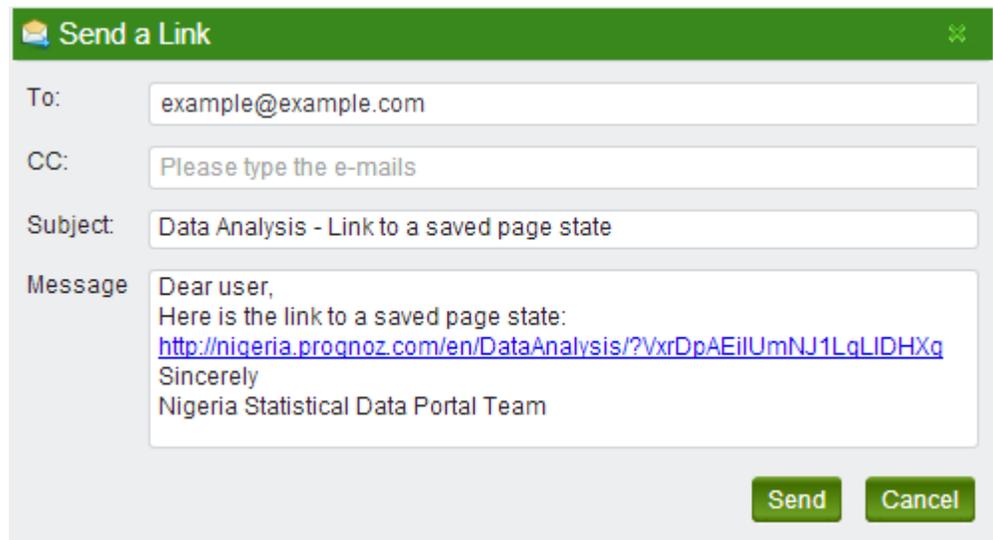

To hide Table view when Table-Chart mode is active, click the Hide Table button  in the toolbar above Chart view. The portal reverts to simple Chart mode. To restore the view of the table, click either the Table Mode button  or the Table-Chart Mode button .

Getting the link the Data Analysis page

The portal enables you to get the link to the configured report.

Do the following:

- Configure the report according to your wish.
- Click the “Send a Link” button  in the toolbar. The Send a Link dialog box appears:

Send a Link

Message: Dear user,
Here is the link to a saved page state:
<http://nigeria.proqnoz.com/en/DataAnalysis/?VxrDpAEiIUmNJ1LqLIDHXq>
Sincerely
Nigeria Statistical Data Portal Team

- Enter your Email, Click Send.

NOTE The current mode of the result area determines what exactly will be opened when you follow by the received link.

Printing and exporting the results

The portal enables you to print the table and chart on your printer or export them to one of three external file formats.

Please note that the current mode of the results area—Table mode, Chart mode, or Table-Chart mode—determines exactly what the portal prints or exports. For example, if Table view is currently hidden because you have enabled Chart mode, then the portal ignores the table and prints or exports the chart only.

Printing the results

To print the results, follow these steps:

1. Click the Print Preview button  in the toolbar. The portal opens a new browser window containing a printer-friendly version of the results.
2. Click the browser's Print button. Your browser sends the printer-friendly version of the results to your printer.

Exporting the results

To export the results to an external file format, follow these steps:

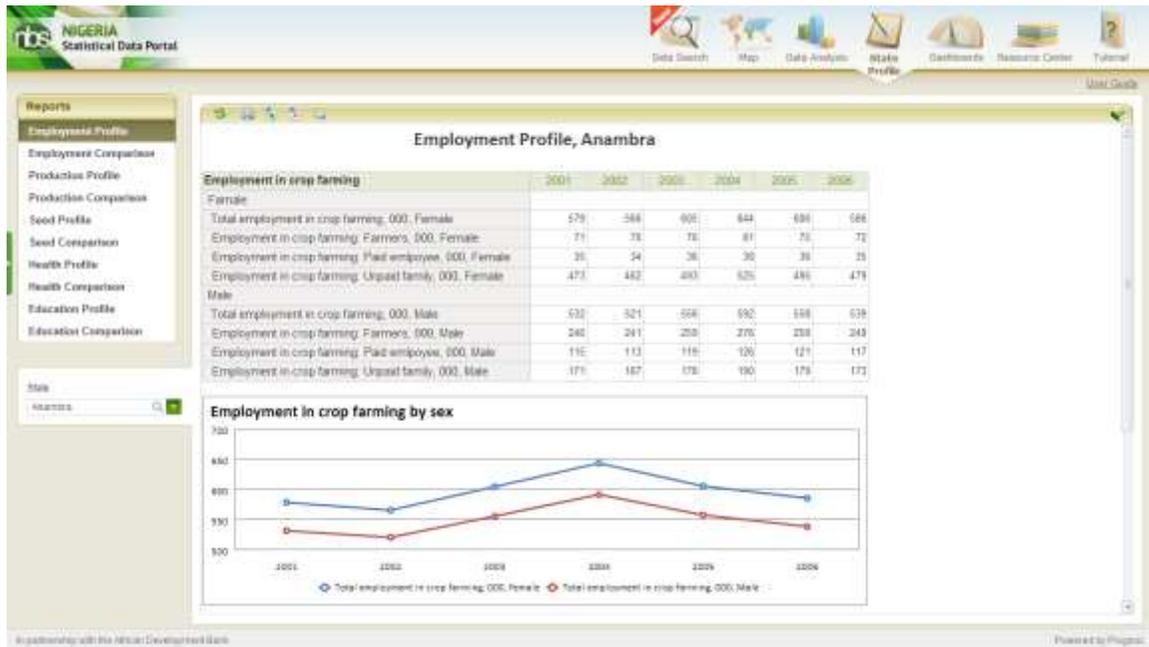

1. In the toolbar, click the button corresponding to the file type to which you want to export the results:
 - **Export to XLS**  . This format opens in Microsoft Excel.
 - **Export to PDF**  . This format opens in Adobe Acrobat.
 - **Export to PPTX**  . This format opens in Microsoft Power Point.
2. The portal opens a new browser window, prepares the external file, and initiates your browser's procedure for downloading files. For example, in Microsoft Internet Explorer, the File Download dialog box appears; click Save to save the exported file to your computer.

6

State Profile

About Reports

The State Profile page of the portal enables you to view, customize, and print or export various pre-defined reports.

- **To browse to the Reports page**, choose State Profile from the navigation bar.

Exploring report types

The Reports page provides ten built-in reports. Every report contains topic-specific indicators.

The ten built-in reports are as follows:

- **Employment Profile.** This report shows various preset of employment indicators for a single, selectable region over a selectable range of years.
- **Employment Comparison.** This report shows preset indicators of employment dynamics for a set of regions over a select range of years.
- **Production Profile.** This report shows preset indicators of production for a single, selectable region over a select range of years.
- **Production Comparison.** This report shows preset indicators of production dynamics for a set of regions over a select range of years.

- **Seed Profile.** This report shows preset indicators of seed for a single, selectable region over a select range of years.
- **Seed Comparison.** This report shows preset indicators of seed dynamics for a set of regions over a select range of years.
- **Health Profile.** This report shows preset indicators of health for a single, selectable region over a select range of years.
- **Health Comparison.** This report shows preset indicators of health dynamics for a set of regions over a select range of years.
- **Education Profile.** This report shows preset indicators of external trade for Tunisia over a selectable range of years.
- **Education Comparison.** This report shows preset indicators of education for a single, selectable region over a select range of years.

Viewing a report

To view a report, click the report that you wish to see in expanded list on the left side of the browser window. The portal loads this report in the results area of the interface and supplies default data. You may change the default selection in one or more of the report dimensions as you require (see “Customizing a report” later in this chapter).

Customizing a report

Each of the portal's eleven built-in reports enables you to change the selection in at least one data dimension. The customizable dimensions appear in a list of dimension boxes directly beneath the expanding list on the left side of the browser window. The dimension boxes contain selectable *elements* or items, which represent the data that appears in the report. Different report types offer different customizable dimensions (see “Exploring report types” earlier in this chapter).

Using the dimension box's context menu

You can also right-click any element in the open dimension box for a context menu of time-saving commands:

- **Select All.** The portal selects all the elements in the dimension.
- **Deselect All.** The portal deselects all the elements in the dimension.
- **Select Siblings.** The portal selects all the elements at the same level in the hierarchy as current element.
- **Deselect Siblings.** The portal deselects all the elements at the same level in the hierarchy as the current element.
- **Select Children.** The portal selects all the child elements of the current parent.
- **Deselect Children.** The portal deselects all the child elements of the current parent.
- **Expand All.** The portal expands all parent elements.
- **Collapse All.** The portal collapses all parent elements.

NOTE Not all context menu commands are available in every dimension box.

Searching for elements in a dimension

To find an element quickly, use the dimension box's Search feature:

- Close the dimension box if necessary, and click its magnifying-glass icon .
- In the dimension box, type the text to find, and press ENTER. The portal displays all element names that contain this sequence of characters in the dimension box's drop-down menu.

Printing and exporting the report

The portal enables you to print the report on your printer or export it to one of three external file formats.

Printing the report

To print the report, follow these steps:

1. Click the Print Preview button in the toolbar. The portal opens a new browser window containing a print-friendly version of the report.
2. Click the browser's Print button. Your browser sends the print-friendly version of the report to your printer.

Exporting the report

To export the report to an external file format, follow these steps:

1. In the toolbar, click the button corresponding to the file type to which you want to export the report:

- **Export to XLS** . This format opens in Microsoft Excel.
- **Export to PDF** . This format opens in Adobe Acrobat.

2. The portal opens a new browser window, prepares the external file, and initiates your browser's procedure for downloading files. For example, in Microsoft Internet Explorer, the File Download dialog box appears; click Save to save the exported file to your computer.
